Bell Building Projects Limited

## **Works Undertaken for SLG Technology Limited.**

Bell Building projects have worked closely with us on both new build and refurbishment projects, notably at our multi-award winning Thermal Plant in Bridge of Weir. During this challenging but unique project the architectural and management team were key in assisting us to achieve a suitable plant layout and in meeting a multitude of onerous building and complex engineering regulations.

Bell Building projects have also worked for the Scottish Leather Group's other operating companies, in the West of Scotland, over many years. BBP have successfully tendered and been awarded D&B works and other smaller civil works which have been conducted safely, to time and to budget.

Being of a similar company size to ours and with a similarly positive yet straightforward attitude makes for a good ongoing working relationship. We are currently working with Martin and his team on a new building project which we hope will soon come to fruition.
